0.1 Problem

(Section 3.10) 18(ii).

$$\begin{vmatrix} y+k & y & y \\ y & y+k & y \\ y & y & xy+k \end{vmatrix} = k^2(3y+k) \quad (0.1.1)$$

0.2 Solution

Given determinant:

$$\Delta = \begin{vmatrix} y+k & y & y \\ y & y+k & y \\ y & y & xy+k \end{vmatrix} \quad (0.2.1)$$

Applying transformation:

$$\xleftrightarrow{R_1 \leftarrow R_1 + R_2 + R_3} \begin{vmatrix} 3y+k & 3y+k & 3y+k \\ y & y+k & y \\ y & y & y+k \end{vmatrix} \quad (0.2.2)$$

$$\xleftrightarrow{C_2 \leftarrow C_2 - C_1} \begin{vmatrix} 3y+k & 0 & 3y+k \\ y & k & y \\ y & 0 & y+k \end{vmatrix} \quad (0.2.3)$$

$$\xleftrightarrow{C_3 \leftarrow C_3 - C_1} \begin{vmatrix} 3y+k & 0 & 0 \\ y & k & 0 \\ y & 0 & k \end{vmatrix} \quad (0.2.4)$$

Taking determinant

$$\implies \Delta = (3y+k)k^2 \quad (0.2.5)$$

$$\begin{vmatrix} y+k & y & y \\ y & y+k & y \\ y & y & xy+k \end{vmatrix} = k^2(3y+k) \quad (0.2.6)$$

Hence proved.
