Q no. 46. what are the points on the y-axis whose distance from the line $(4 \ 3)x = 12$ is 4 units.

Solution:

Here ,direction vectors of the lines are $\begin{pmatrix} 3 \\ -4 \end{pmatrix}$
normal vector n is given by,

$$n = \begin{pmatrix} 4 \\ 3 \end{pmatrix} \quad (0.0.1)$$

Using the formula for the distance of a point P from a line

$$d = \frac{|n^T P - c|}{\|n\|} \quad (0.0.2)$$

Since the point lies on the y-axis. let

$$P = \begin{pmatrix} 0 \\ k \end{pmatrix} \quad (0.0.3)$$

the equation of the line is :

$$n^T x = c \quad (0.0.4)$$

$$\Rightarrow \frac{|n^T P - c|}{\|n\|} = 4 \quad (0.0.5)$$

$$\Rightarrow 3k - 12 = \pm 20 \quad (0.0.6)$$

$$\Rightarrow k = -8/3 \text{ or } 32/3 \quad (0.0.7)$$

therefore points on y-axis at distance of P from line are $(0,-8)$ and $(0,32/3)$.
